

I want to contact my friends in my state and out of the states on Video Phone, but we have different service providers like Sorenson and D-Link. We cannot use the phone number to call because of the different service providers. We are sucked. We have to ask eachother to get our IP # number that has a long number (for example: 24.44.200.235). I've realized that my IP number does not stay the same, and it changes sometimes without me knowing. Please stop using IP number and use phone number like hearing people do with their different providers. We want all providers should follow the same Soreson's system of using phone number. Please solve this problem for us. Thank you.
